Grade	**10.00** out of 10.00 (**100**%)

Question 1 | Correct Mark 10.00 out of 10.00

Playing with Numbers:

Ram and Sita are playing with numbers by giving puzzles to each other. Now it was Ram term, so he gave Sita a positive integer 'n' and two numbers 1 and 3. He asked her to find the possible ways by which the number n can be represented using 1 and 3.Write any efficient algorithm to find the possible ways.

Example 1:

Input: *6*
Output:*6*
Explanation: *There are 6 ways to 6 represent number with 1 and 3*

1+1+1+1+1+1
3+3
1+1+1+3
1+1+3+1
1+3+1+1
3+1+1+1

Input Format

First Line contains the number n

Output Format

Print: The number of possible ways 'n' can be represented using 1 and 3

Sample Input

6

Sample Output

6

Answer: (penalty regime: 0 %)

```c
#include <stdio.h>

unsigned long long countWays(int n) {
    if (n <= 2) {
        return 1;
    }

    // Base cases: f(0) = 1, f(1) = 1, f(2) = 1
    unsigned long long prev3 = 1; // stores f(i-3)
    unsigned long long prev2 = 1; // stores f(i-2)
    unsigned long long prev1 = 1; // stores f(i-1)
    unsigned long long current = 0;

    for (int i = 3; i <= n; i++) {
        current = prev1 + prev3;
        prev3 = prev2;
        prev2 = prev1;
        prev1 = current;
    }

    return current;
}

int main() {
    int n;
    if (scanf("%d", &n) == 1) {
        printf("%llu\n", countWays(n));
    }
    return 0;
}
```

	Input	Expected	Got	
✔	6	6	6	✔
✔	25	8641	8641	✔
✔	100	24382819596721629	24382819596721629	✔

Passed all tests! ✔

Correct

Marks for this submission: 10.00/10.00.
