```c

#include <stdlib.h>

int findDuplicate(int arr[], int n) {
    if (n <= 1) return -1;

    // Phase 1: Detect collision point inside the cycle
    int slow = arr[0];
    int fast = arr[0];

    do {
        slow = arr[slow];
        fast = arr[arr[fast]];
    } while (slow != fast);

    // Phase 2: Locate the entrance to the cycle (duplicate value)
    slow = arr[0];
    while (slow != fast) {
        slow = arr[slow];
        fast = arr[fast];
    }

    return slow;
}

int main() {
    int n;
